

# Summary of Molecular Based Herbicide Resistance and Plant ID testing – 2024

Mike Cowbrough, Kristen Obeid - OMAFA

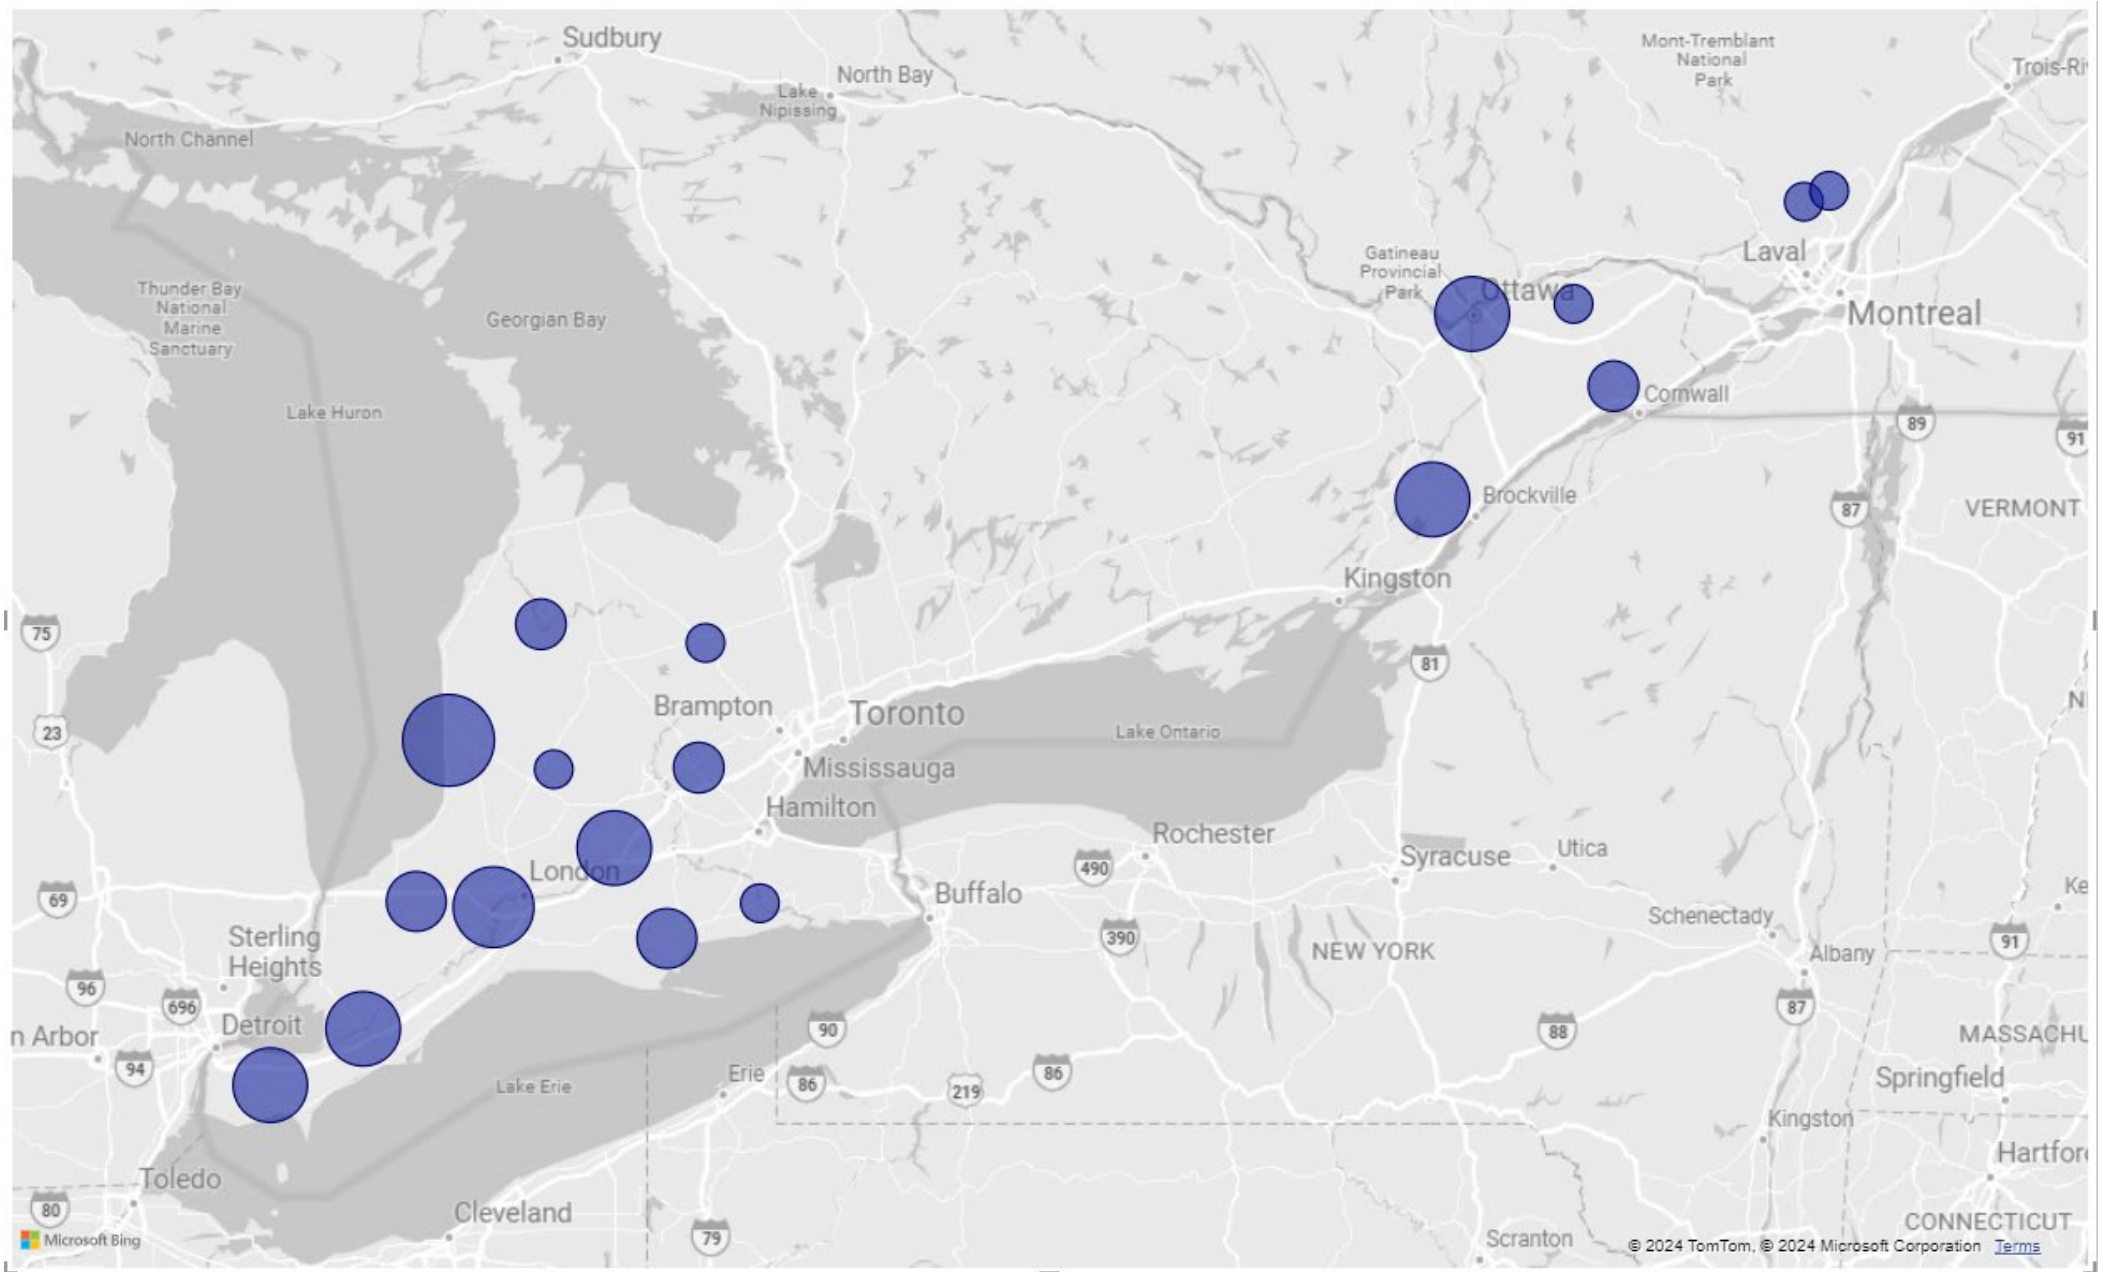

A photograph of a cornfield showing rows of young corn plants. The corn plants are green and appear to be in the early stages of growth. Between the rows of corn, there are numerous small, green weeds. The ground is sandy and light-colored. The lighting is bright, suggesting a sunny day.

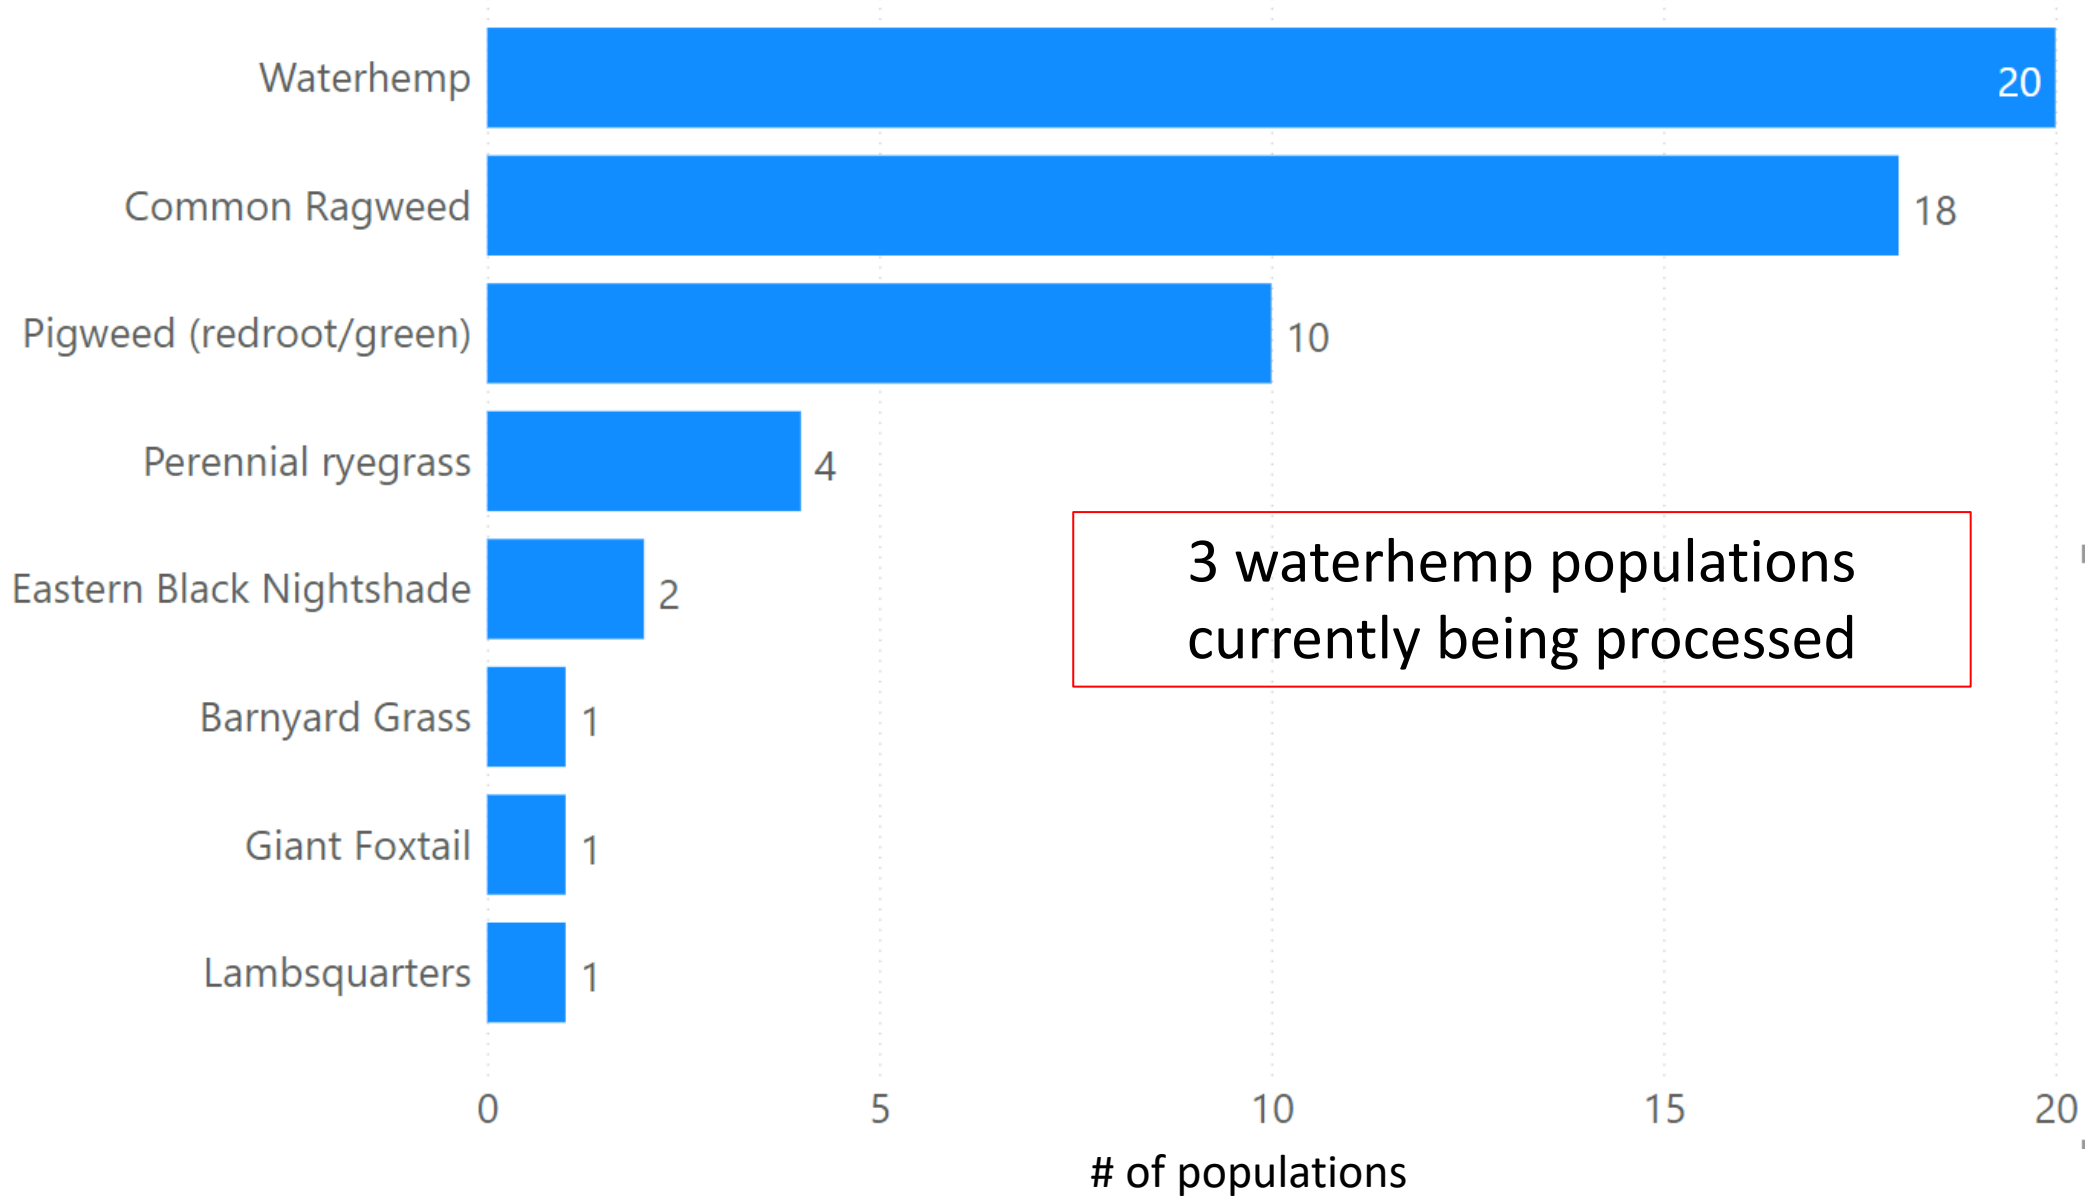

# Financial support provided by:

# Areas that submitted weed populations for testing

# Species tested: 57 populations

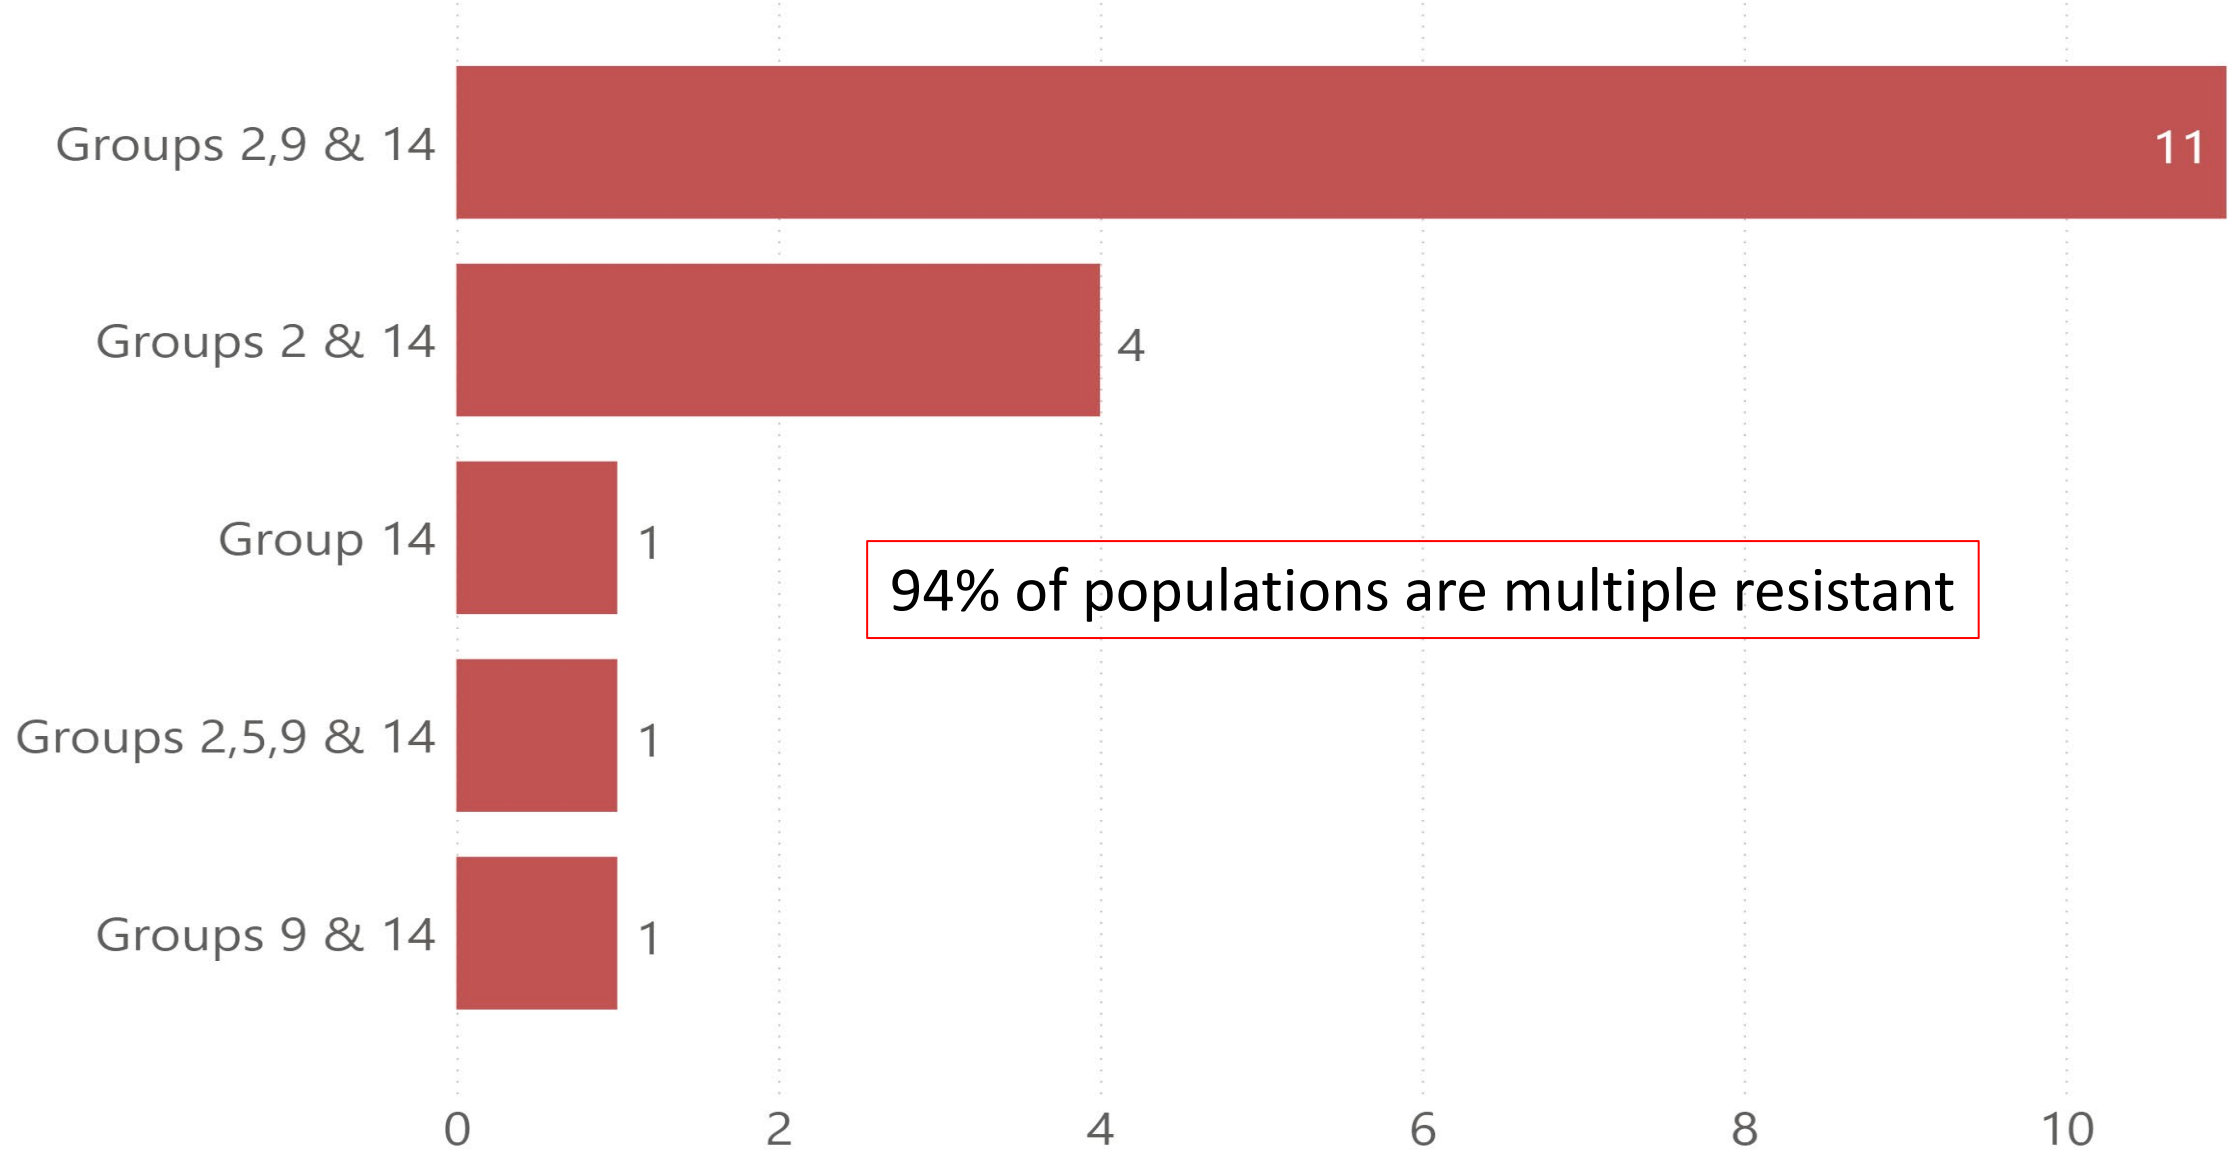

# Populations tested – field crops

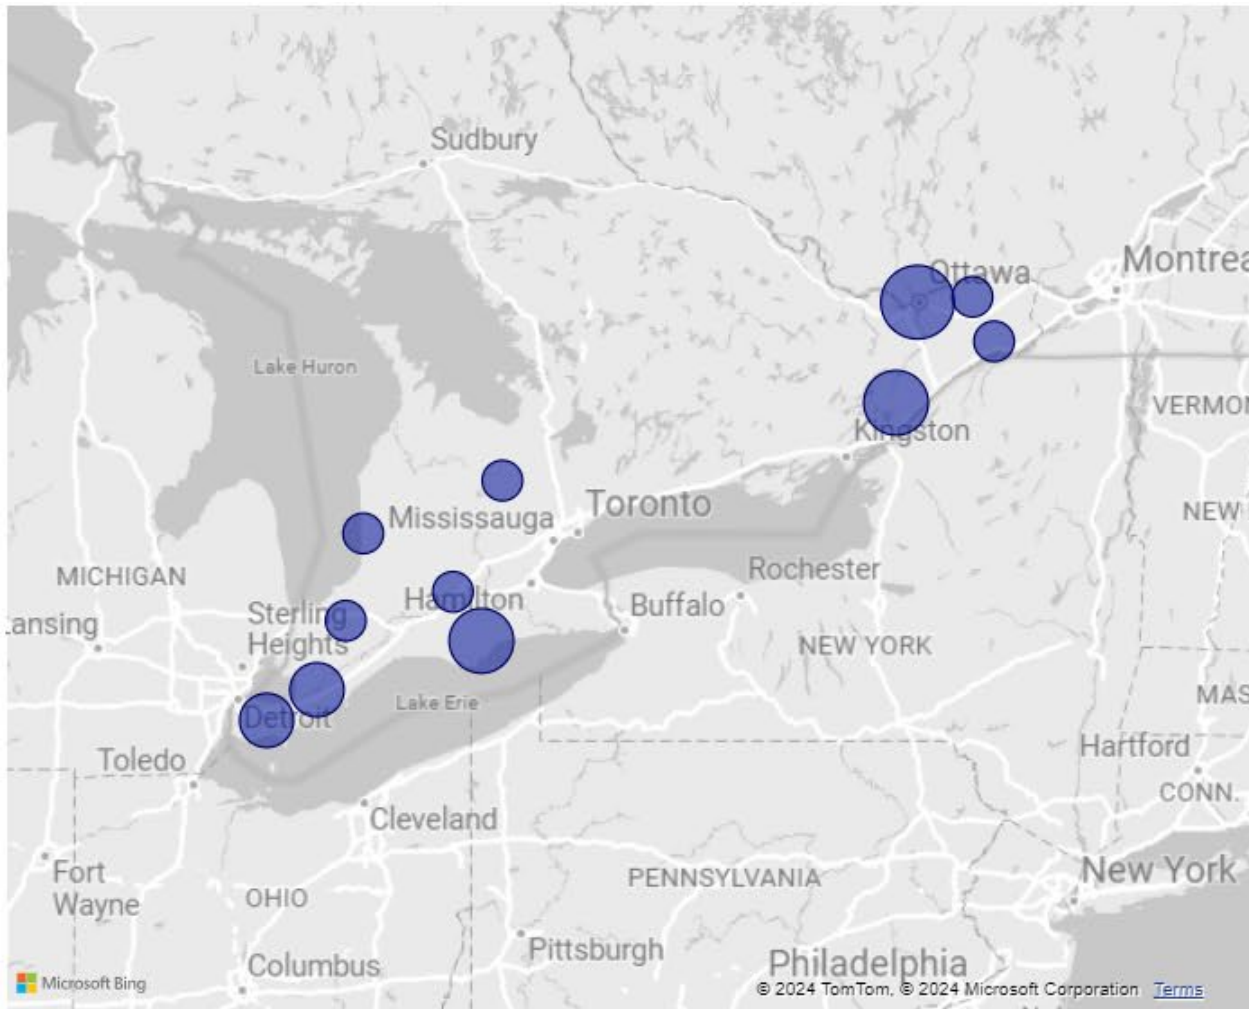

# Populations tested – hort crops

# Waterhemp – all populations (pops) were resistant

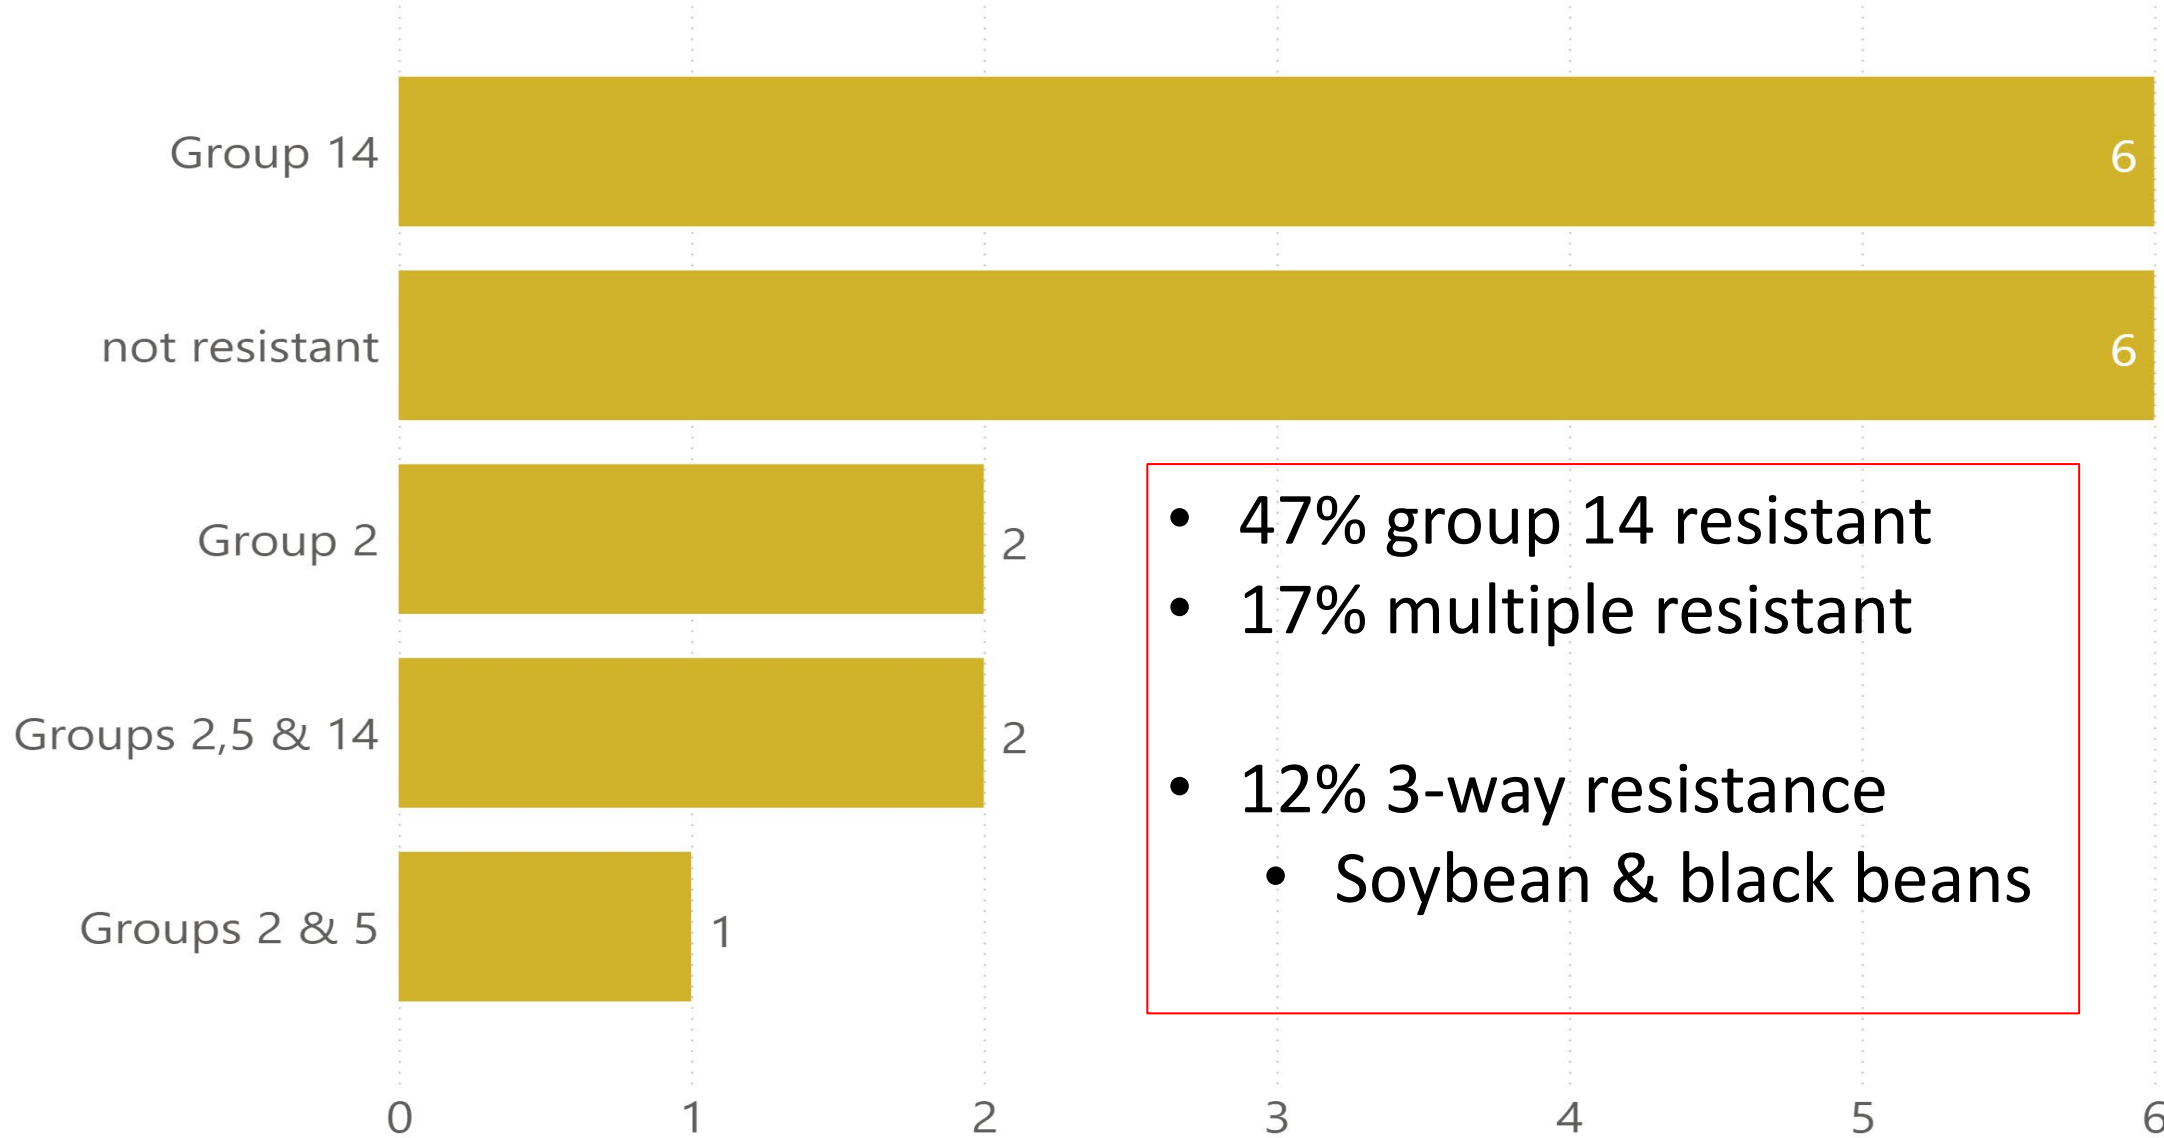

Waterhemp: resistant populations in 2024

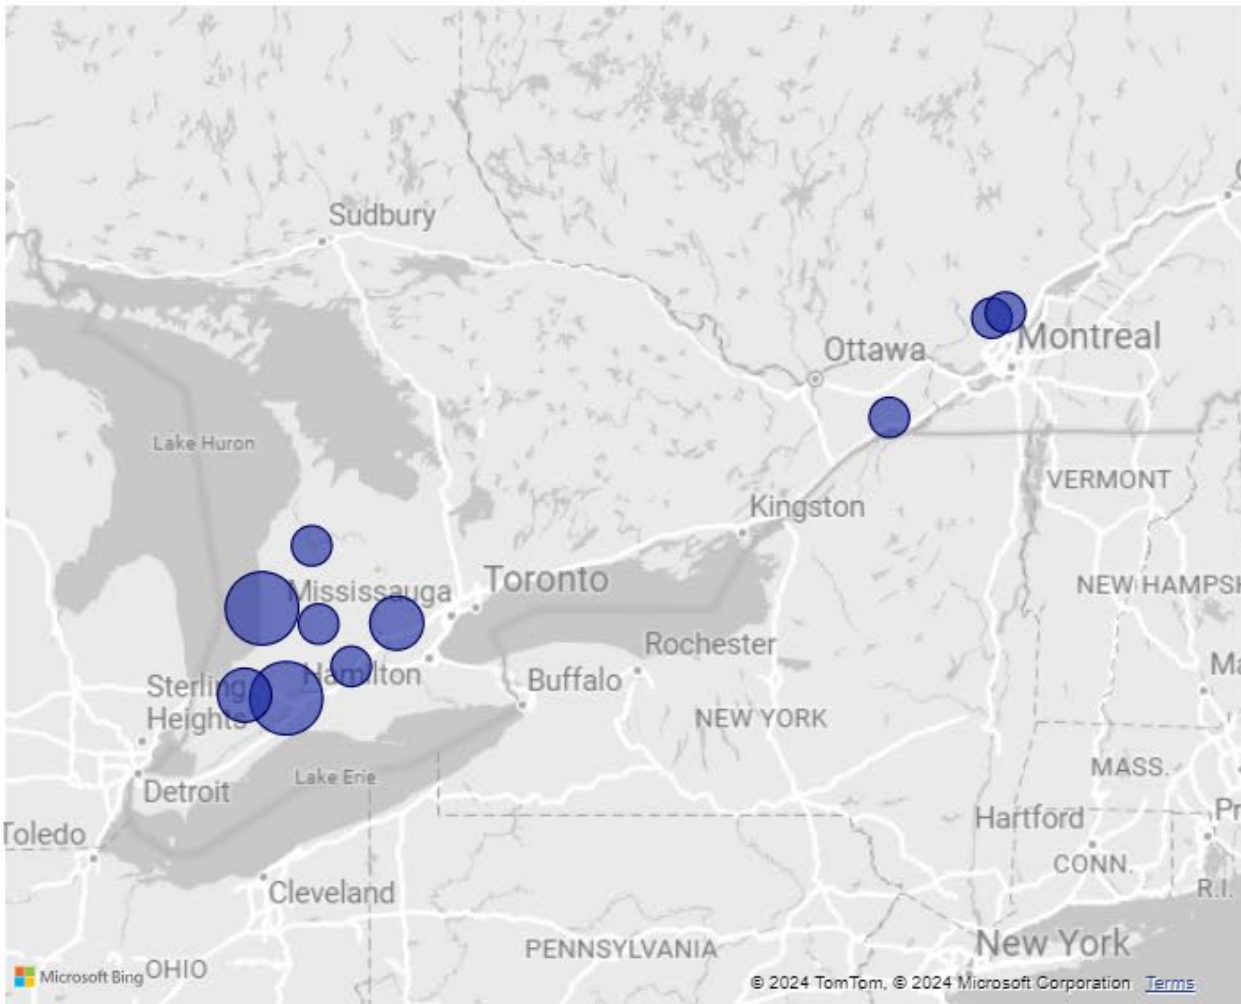

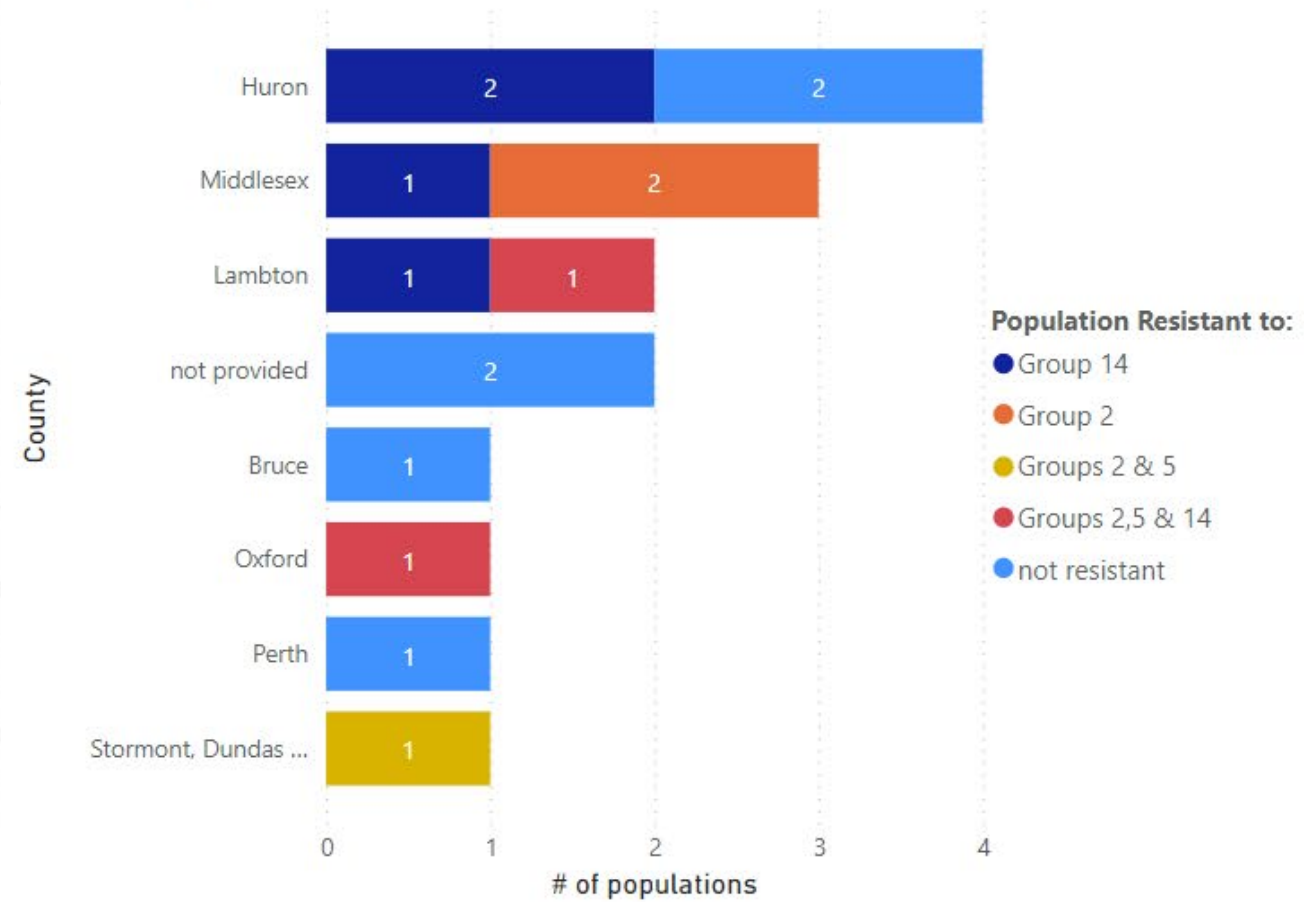

# Common ragweed: 65% of pops were resistant

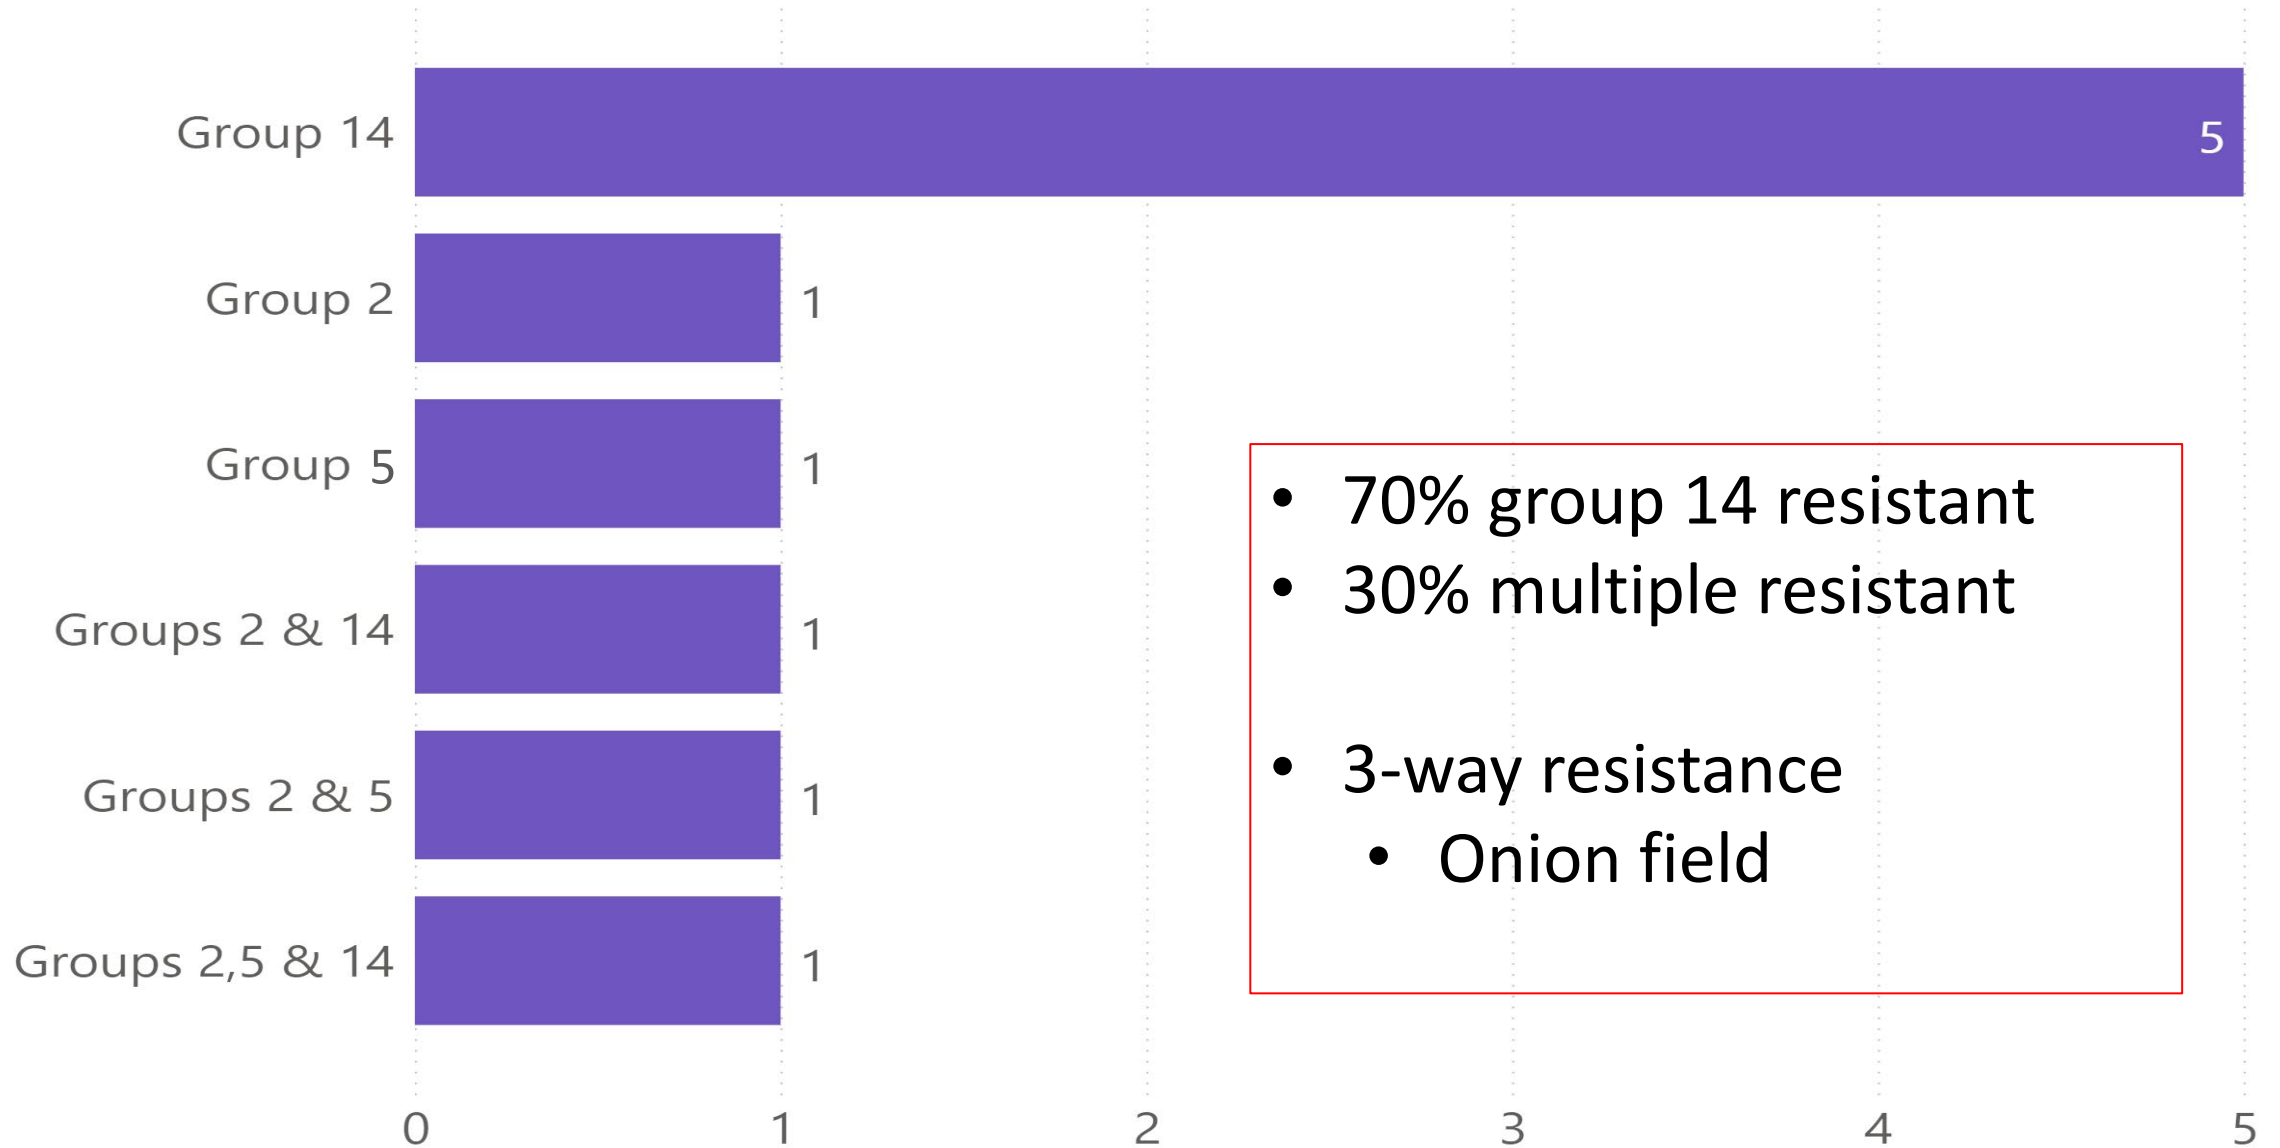

- 47% group 14 resistant
- 17% multiple resistant
- 12% 3-way resistance
  - Soybean & black beans

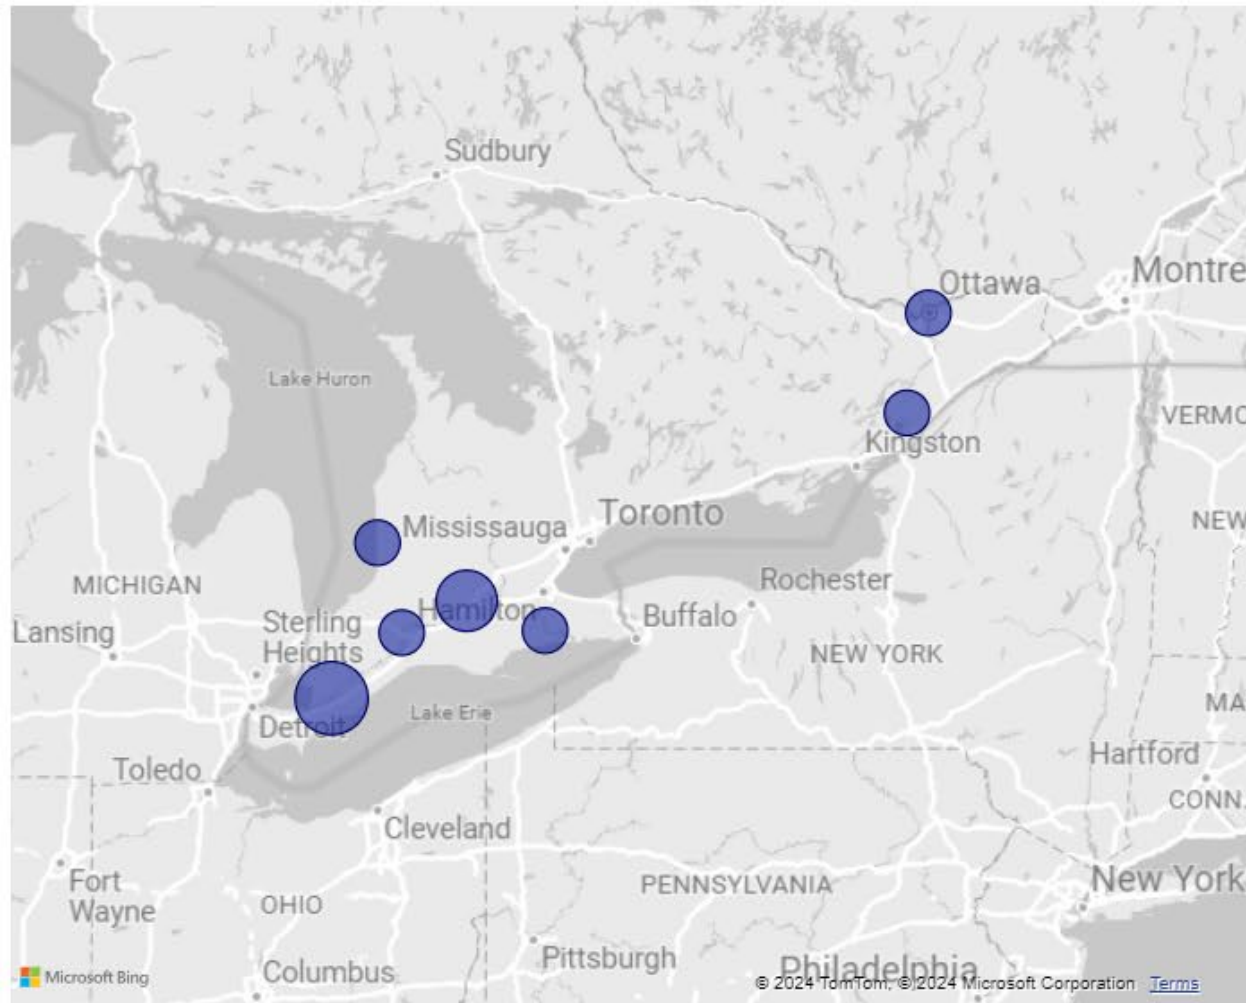

Common ragweed: resistant populations in 2024

# Pigweed (redroot/green): all pops resistant

- 70% group 14 resistant
- 30% multiple resistant
  
- 3-way resistance
  - Onion field

Pigweed resistant populations in 2024

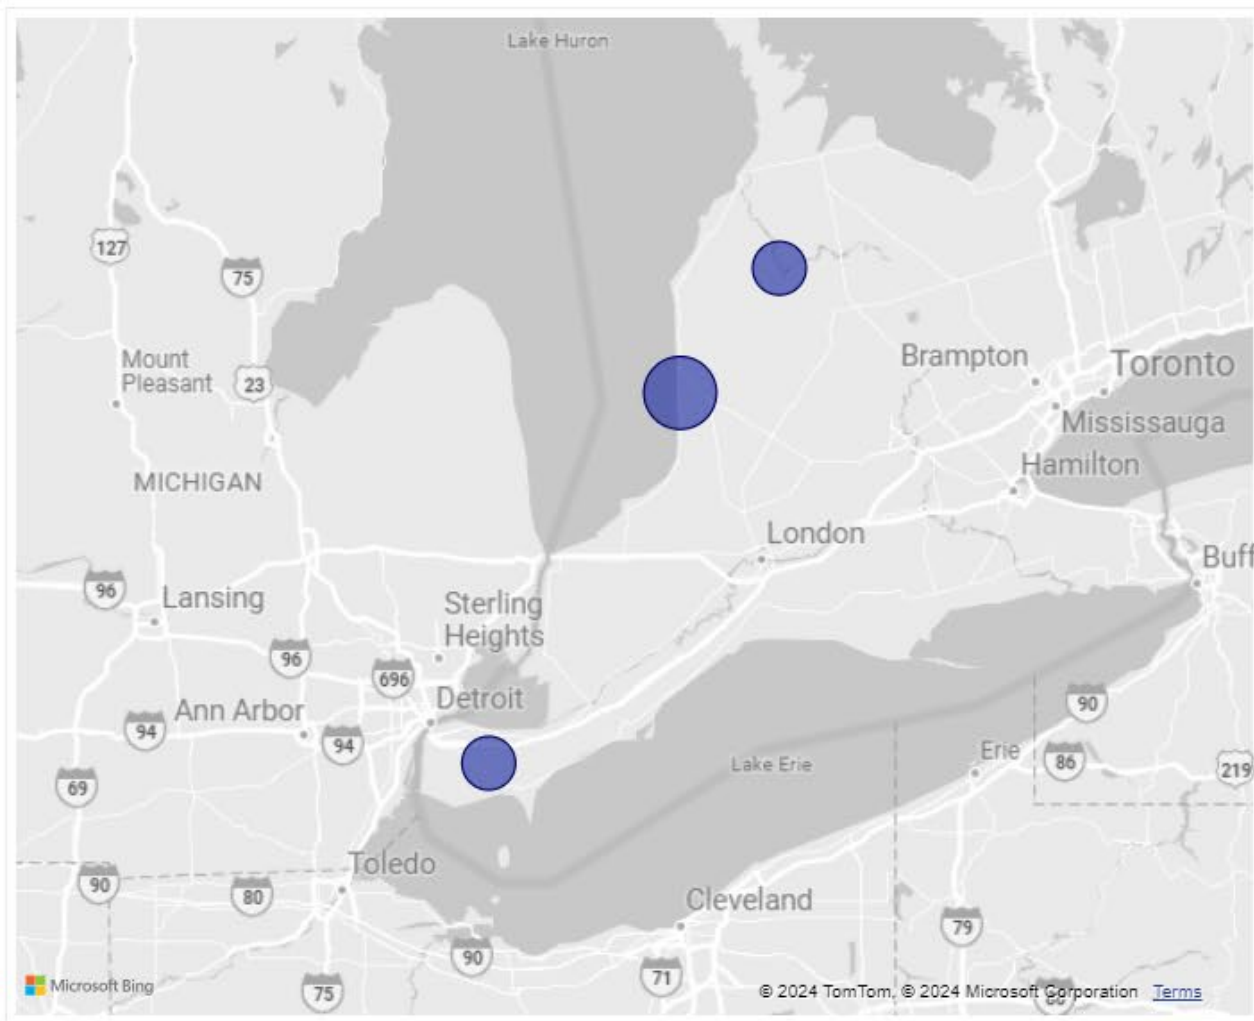

# Perennial ryegrass

- All pops were glyphosate resistant

Perennial ryegrass resistant populations in 2024

# Eastern Black Nightshade

- 2 populations were resistant to imazethapyr (group 2)
- Middlesex and Oxford

# Lambsquarter: 50% of pops resistant

- 1 population was resistant to triazine herbicides (group 5)
- Leeds and Grenville

# Species identification - Grasses

Species	County
Loose silky bentgrass	Wellington
Perennial ryegrass	Bruce, Essex, Huron, Wellington
Sheep's fescue	Prince Edward County
Wild rye ( <i>Elymus</i> )	Wellington
Roughstalk bluegrass	Wellington
Southern crabgrass	Essex

# Species identification – Broadleaf weeds

Species	County
Palmer amaranth	Bruce, Haldimand
Waterhemp	Essex, Huron, Norfolk, Prescott-Russell
Green pigweed	Huron
Lambsquarters	Wellington
Common ragweed	Oxford
Redroot pigweed	Chatham-Kent, Essex
Groundcherry ( <i>Physallis</i> spp.)	Huron

# Limitations

- If the mechanism of resistance of a species is not a target site mutation with a molecular test, then resistance won't be detected
  - Could result in false negatives
    - e.g. group 5 resistance in waterhemp
      - Dose response tests have shown high % of atrazine resistance
      - Molecular testing has rarely indicated group 5 resistant in 2024 sampling.
      - Best practice is to also do dose response test via Tardif lab.

# Challenges

- Testing costs have increased by 40%
